DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114.

Applicant's submission filed on 03-03-2004 has been entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 27 and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art (hereinafter "APA") in view of Foster et al. (US#4271228).

4. Regarding claim 27, the APA, specifically Figs. 5-6 and paragraphs 2-4 of the instant application, discloses a gasket for a high temperature joint wherein the gasket comprises: a gasket basic substance 2 formed by filling gaps of a meshed metallic reinforcing member 4 with a heat resistant filler 3; and a coerture 5 made of a heat resistant antifriction material such as boron nitride.

5. The APA discloses the filler material being mainly composed of graphite as opposed to diatomaceous earth and/or synthetic mica and added with synthetic bentonite as claimed by the

applicant. Foster discloses a heat resistant gasket material wherein the filler can be mainly composed of graphite, synthetic mica, and/or synthetic bentonite (col. 2, lines 12-24). Therefore, as evidenced by Foster, graphite, synthetic mica, and synthetic bentonite are known art recognized material equivalents for fillers, and it would have been an obvious matter of design choice to modify the APA by utilizing a filler mainly composed of synthetic mica and added with synthetic bentonite as the selection of a known material based upon its suitability for the intended use is a design consideration within the skill of the art. In re Leshin, 227 F.2d 197, 125 USPQ 416 (CCPA 1960).

6. Regarding claim 28, the APA discloses the reinforcing member is made of metallic wires, specifically stainless steel wires.

Allowable Subject Matter

7. Claims 14-17 and 22-25 are allowed.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
